Scope of Work

- **Workflow Development:** The creation of an interactive tool for uploading floor plans, selecting and resizing ICF block types, and tracing the floor plan to fit the structure. This tool will also be capable of automatically calculating the number of ICF blocks used and generating a detailed cost estimate that includes both material and labour costs.
- **ICF Block Library:** The development of a predefined set of standard ICF block types, with customization options for block dimensions and dynamic components that adjust based on user input.
- **Smart Placement and Stacking:** A feature that offers automated snapping for easy alignment, layered stacking with configurable block positioning, and real-time visualization of wall sections.
- **Cost and Quantity Estimation:** An integration that enables the automatic calculation of required blocks per design and cost estimation based on block type and quantity.
- **Quote Generation:** Functionality that enables the importation and tracing of floor plans, automated identification of ICF block requirements from floor plan data, and the generation of detailed cost estimates including material, labour, and additional expenses.
- **Export and Documentation:** Capability for exporting to SketchUp layout for professional documentation, with compatibility across other 3D design tools.

Meetings and Reporting

- Development:
 - Ad-hoc scheduled calls with team whenever required.
 - Weekly progress update from Project manager.
 - Weekly demonstrations and discussions with customers by the Project team.

Deliverables

- Fully functional SketchUp Extension tool for building ICF blocks.
- User documentation and training materials.
- Support and maintenance guidelines.

Out of Scope

- Any integrations with external APIs, platforms, or software that are not explicitly defined in the proposal.
- Custom feature development beyond agreed requirements
- Quote export option is not included.
- Any additional features or functionality requested after the initial scope has been finalized.
- Default UI provided by Sketchup will be used.
- Only basic user manuals and operational guides will be provided; in-depth training sessions or customized documentation will be outside the scope.
- While basic testing will be conducted, large-scale performance testing for high concurrency or traffic spikes is not included.
- With respect to Infrastructure & hosting Services, the proposal does not include licensing, hosting, cloud infrastructure setup, or ongoing server management.
- No integration with external systems, other than the ones mentioned in scope of work, such as CRMs, marketing automation tools, or APIs.
